MaximEyes + Mango Voice:

The Future of Front Office Automation

Seamlessly integrate your EHR, telephony, and patient engagement into one unified workflow.

Why It Matters

Eye care staff are pulled in a dozen directions every day. Missed calls, double data entry, and siloed systems waste time and create frustration. The MaximEyes + Mango Voice integration solves these challenges by linking phone activity directly to your EHR and EVAA Virtual Assistant.

Benefits for Your Practice

✓ **Instant Patient Identification:** See who's calling, their balance, insurance, and last visit notes.

✓ **Click-to-Call Efficiency:** Dial out from the patient record in one click.

✓ **Revenue Capture:** Visibility into balances improves collections during calls.

✓ **Staff Productivity:** Reduce repetitive manual work and free staff to focus on patients.

How It Works

1 Sign up with Mango Voice for VOIP service and phones.

2 Enable the Mango integration in MaximEyes with your API token.

3 Start handling calls with real-time patient insights.

KEY FEATURES

Click-to-Call from the patient ribbon

Inbound Call HUD with appointment billing details

Multi-patient match selection

Unknown caller handling

Stackable call notifications

User-level popup preferences
